Galintel® Steel Lintels

NEPEAN™ Building & Infrastructure

NEPEAN Building & Infrastructure is a division of NEPEAN, Australia's largest privately owned engineering, mining services and industrial manufacturing organisation.

Under the renowned Galintel® brand, NEPEAN Building & Infrastructure designs and manufactures Australia's highest quality steel lintels for the building industry.

The specialised range of lintels includes flats, angles and T-bars, all designed for optimum support of brickwork above clear openings.

The innovative design of Galintel® products enables weight savings of up to 40% while maintaining strength, structural rigidity and load bearing capacity.

Galintel® products are hot-dip galvanised to Australian Standards to ensure that all surfaces (legs, edges and ends) are fully protected.

GALINTEL® HOT-DIP GALVANISED STEEL LINTELS

BEST LINTEL BAR NONE

R3 DURABILITY RATING

25-YEAR WARRANTY*

Use the simple guides in this brochure and select the right Galintel® every time, for:

- Peace of mind
- Superior performance
- Long life and durability

Genuine Galintel® hot-dip galvanised steel lintels are 40% lighter than solid lintels (and 40% easier to carry) with a high strength to weight ratio.

The ribbed Galintel® profile creates a superior bond with the mortar. The brickwork, mortar and lintel work together to form a composite beam with exceptional strength and load-carrying capacity.

You won't have to worry about corroded lintels and cracked brickwork, thanks to the generous galvanising layer – including the ends of the product where corrosion often begins.

All Galintel® bars comply with the following standards:

- Hot-dip galvanised to AS/NZS4680:2006
- Up to R3 durability ratings in accordance with AS/NZS2699.3:2001
- Loads in accordance with AS/NZS1170.1:2002

Durability & corrosion resistance (R3 rating)

All Galintel® products are hot-dip galvanised with a heavy zinc coating of 600 g/m² which complies with an R3 durability rating. Durability is a function of the thickness of the zinc coating (black steel is classified as R0 and stainless steel as R5). Galintels® can achieve an R4 durability rating when coated with a two-part epoxy coating (contact NEPEAN Building & Infrastructure for specifications).

Product Warranty

All Galintel® products are guaranteed against defects in materials and workmanship. NEPEAN Building & Infrastructure further warrants that its Galintel® products will suffer no loss of function nor will they adversely affect the masonry within 25 years from the date of installation. For full warranty conditions and registration details visit www.nepean.com.

Don't settle for substitutes. Look for the Galintel® brand.

GALINTEL® SOLID BASE ANGLES & FLATS

QUICK SELECTION GUIDE

How to use the quick selection guide

1. Determine the Loading Category by referring to the diagrams below.
2. Determine the span of the opening, including end bearings, and use the Clear Span Length table to find the appropriate Galintel® profile.
3. Determine the load to be applied to the Galintel® and refer to the Safe Load tables on page 5 to find the correct profile size and stock length.

Example:

Loading Category B (cavity wall construction), 1800mm span with UDL of 1400 kg/m. From the safe load tables on page 5, this requires a Galintel® Solid Base Angle with 150mm x 100mm profile and stock length of 2100mm.

These diagrams represent general domestic and light commercial construction only, using conventional framing materials and standard building practices.

All load-bearing walls must have at least three courses of bricks over the opening. The wall above the opening should not be subjected to major loads other than those from normal roof, ceiling and floors. Avoid point loads above the opening, such as hot water tanks and roof storage areas.

Category E loadings that do not comply with the above conditions should be referred to a structural engineer.

Construction Category

- Category A**
Non-load bearing brick veneer with separate structural timber frame.
- Category B**
Cavity wall equally supported on both skins. Supported roof span < 8m.
- Category C**
Lightweight sheet roof and ceiling supported on single skin. Supported roof span < 8m.
- Category D**
Lightweight timber truss, tiled roof and sheet ceiling supported on single skin. Supported roof span < 8m.
- Category E**
Load-bearing internal brickwork under upper storeys. Supported floor span < 8m.

Now find the right Galintel® profile for your clear span

Follow the colour code from the loading categories above. Add end bearing of 100-150mm to both ends of span.

PROFILE SIZE & LOADING CATEGORY		CLEAR SPAN LENGTH											
		600	700	800	900	1200	1500	1800	2100	2400	2700	3000	3600

Refer to load tables on page 5 for correct profile size and length

GALINTEL® SOLID BASE ANGLES & FLATS

SAFE LOAD TABLES

Angles & Flats – safe load tables

Unless otherwise indicated, load values in the tables are limited by stress. For example, for a span of 2100mm, a 150 x 100 x 2400 Galintel® may have a load of 949 kg/m applied safely, with a maximum long term deflection of 1/600 span or 3.5mm (2100/600 = 3.5).

All tables are intended as a guide only. Qualified expert advice should be sought in deciding the suitability of any structural product for a construction application.

UDL = Uniform distributed load

		FLAT BAR					SOLID BASE ANGLE			
FLAT BAR 85 x 7 5 kg/m	Span (mm)	600	700	800	900	1000

	Load (kg)	3024	2520	2100	1890	1680	1512	1312		
	UDL (kg/m)	2016	1400	1000	788	622	504	364		

□ Loads not limited by deflection ■ Loads limited by short term deflection of 1/600 span ▨ Loads limited by short term deflection of 1/360 span

Control Joints

Where control joints are used as a required structural element, loading of the lintel should be reduced by one third.

Propping

For best results all lintels must be propped before bricklaying. Props must be no further than 1.2m apart and must remain in place until the mortar has fully cured.

Brick composite beam
 Minimum 3 courses of bricks.
 Note: Mortar should be present at all contact surfaces between bricks and lintel

Composite Action

Galintel® products rely on composite action. Therefore, to achieve ultimate performance, mortar must be present at all contact surfaces between bricks and lintel.

GALINTEL® TRADITIONAL ANGLES

QUICK SELECTION GUIDE & SAFE LOAD TABLES

Quick selection guide

Use the Quick Selection Table to find an appropriate profile and length for the required span and Construction Category (see page 4). Include end bearing lengths of 100mm on both ends of bar (for openings up to 1000mm) or 150mm (for openings greater than 1000mm). Use the Safe Load Tables to determine which product will safely carry the load.

Quick Selection Table

		CLEAR SPAN LENGTH (mm)							
		900	1200	1500	1800	2100	2400	2700	3000

	Bar Length (mm)	2100	2400	2700	3000	3300	3600	4000
	Total Load (kg)	3205	2355	1800	1425	1150	950	800
	UDL (kg/m)	1781	1121	751	527	384	289	222
	Point Load (kg)	1690	1325	1010	800	645	535	450

Notes on safe load tables for Traditional Angles

Loads given are total (allowable) loads including lintel and brickwork.

These load tables assume that bricks

and props fully restrain the lintel against twisting and local buckling of compression leg. Non-composite action was used in the calculations.

UDL for each Construction Category was based on 8m of supported span

of floor or roof (of which 4m is taken by the section being considered). Six courses of bricks were considered for each category. UDLs for each Loading Category in kg/m were: A – 124, B – 374, C – 391, D – 605, E – 2202, F – 1020.

GALINTEL RENDABAR®

SAFE LOAD TABLES (100 x 100)

Please be advised this product is no longer available for order, information included for reference only.

Galintel Rendabar® is a total load bearing bar, specifically designed to facilitate cement rendering. The bond between mortar, brickwork and lintel forms a composite beam of superior strength and structural integrity. The platform leg provides a wide base of support for brickwork and a generous keying area for cement rendering.

Light weight, rigidity

Galintel Rendabars® are considerably lighter than other forms of lintels, contributing to ease of handling and faster construction and less potential damage to green masonry.

Mortar bonding with the multi-ribbed section locks the Rendabar® firmly to the masonry, providing superior lateral bracing and rigidity.

RENDABAR 100 x 100 x 8 9 kg/m		POINT LOAD (kg) 600mm TRUSS SPACING

GALINTEL RENDABAR®

SAFE LOAD TABLES (150 x 100)

Please be advised this product is no longer available for order, information included for reference only.

Control joints

Where control joints are used as a required structural element, loading of the lintel must be reduced by one-third.

Propping

Rendabar® spans must be propped or tommed at equal intervals (not more than 1.2m apart) when brickwork is laid up rapidly over and above two courses.

Code compliance

Galintel Rendabars® have been extensively tested by Unisearch Limited, the research and development company of the University of New South Wales, for strength, structural adequacy, and compliance with relevant Australian Building Codes. ABSAC approved (Technical opinion No.205).

Brick composite beam
Minimum 3 courses of bricks.
Note: Mortar must be present at all contact surfaces between bricks and Rendabar

Composite Action

Galintel® products rely on composite action. Therefore, to achieve ultimate performance, mortar must be present at all contact surfaces between bricks and lintel.

GALINTEL® MULTI-RIB T-BAR

SAFE LOAD TABLES

Please be advised this product is no longer available for order, information included for reference only.

Galintel® Multi-Rib T-Bars are cost-effective lintels that provide structural rigidity, high strength-to-weight ratio and resistance to corrosion.

The multi-ribbed profile forms a superior bond with the mortar. This bond between mortar, brickwork and lintel creates a composite beam of superior strength and structural integrity.

The Galintel® Multi-Rib T-Bar is a total load bearing lintel designed to support 230mm brickwork over a clear opening.

Installation

Place Galintel® Multi-Rib T-Bar in position on brick piers, with minimum end bearing of 150mm.

Prop before bricklaying. Props must be no further than 1.2 metres apart and must remain in place until mortar has fully cured.

Apply mortar (minimum 1:4) to all brick faces in contact with the T-Bar.

The same number of courses must be laid internally and externally to prevent twisting of the T-Bar.

Composite Action

Galintel® products rely on composite action. Therefore, to achieve ultimate performance, mortar must be present at all contact surfaces between bricks and lintel.

Brick composite beam
Minimum 3 courses of bricks.
Note: Mortar must be present at all contact surfaces between bricks and T-Bar

Control Joints

Where control joints are used as a required structural element, loading of the lintel should be reduced by one third.

Notes on safe load tables for Multi-Rib T-Bar

The tables show the number of brick courses needed to safely carry the total load across the clear span opening.

Determine the load to be carried by the T-Bar (e.g. roof, framing, etc., plus live load allowance) but excluding lintel and bricks.

Total load is expressed as kg for point loads or kg/m for distributed loads. Where more than 4 equal point loads are applied, use the Distributed Load tables.

The spans shown are clear openings. The length of T-Bar ordered must include a minimum end bearing allowance of 150mm at both ends.

Galintel® Multi-Rib T-Bar safe load tables

	6	2650	2350	2090	6	880	730	620

The Galintel® T-Bar is a welded galvanised T-section comprising two multi-ribbed steel plates, 200mm wide with a nominal thickness of 7 or 9mm (depending on the length). The steel conforms to AS3678-250 with a minimum ultimate tensile strength of 410 MPa and yield strength of 280 MPa. Welding is conducted to the requirements of AS4100-1990 and galvanising conforms to AS/NZS 4680:2006.

GALINTEL® TRADITIONAL T-BARS

SAFE LOAD TABLES

Traditional T-Bar features

- Designed and manufactured in Australia
- Comply with Australian Standards and Building Code requirements
- Manufactured under process-based quality control requirements
- Product certified by Unisearch Limited
- Fully machine welded
- 300 MPa grade steel
- All surfaces, including ends, fully hot-dip galvanised with 600 g/m² zinc coating
- R3 durability rating as standard finish

Control Joints

Where control joints are used as a required structural element, loading of the lintel should be reduced by one third.

Installation

Place Traditional T-Bar in position on brick piers, with minimum end bearing of 150mm.

Prop before bricklaying. Props must be no further than 1.2 metres apart and must remain in place until mortar has fully cured.

Apply mortar (minimum 1:4) to all brick faces in contact with the T-Bar.

The same number of courses must be laid internally and externally to prevent twisting of the T-Bar.

Notes on safe load tables for Traditional T-Bar

These load tables assume that:

- The web of the T-Bar is vertical
- The T-Bar is simply supported at both ends
- The T-Bar is loaded such that the load acts vertically and equally on both sides of the web
- The T-Bar can be considered to be fully supported laterally along its entire length
- UDL loads are constant along the length of the bar
- All loads, including the T-Bar and any brickwork, are considered
- Hot-dip galvanised to AS/ NZS4680:2006
- Loads in accordance with AS/ NZS1170.1:2002

If any of these conditions is not satisfied, the design should be referred to a qualified structural engineer.

Galintel® Traditional T-Bars – safe load tables

Note a minimum of three courses of bricks must be laid above the lintel.

GALINTEL® CAVI-T-BAR

SAFE LOAD TABLES

Galintel Cavi-T-Bar™
Australian Registered Design No 306215

Galintel Cavi-T-Bar™ Lintel

The Galintel Cavi-T-Bar™ lintel is the ideal solution for cavity walls, either double brick, or brick veneer with timber trusses.

The Cavi-T-Bar™ was developed in response to demand from builders for an economical substitute for built-up steel sections such as parallel flange channel and plate.

Similar to a T-Bar but with a special top flange incorporated into the upright section, the Galintel Cavi-T-Bar™ provides an off-the-shelf solution for cavity walls, hot-dip galvanised, fully engineered and university tested

Control Joints

Where control joints are used as a required structural element, loading of the lintel should be reduced by one third.

Cavi-T-Bar™ features

- New versatile lintel beam
- Convenient, economical substitute for built-up steel sections such as parallel flange channel and plate
- Up to 20% lighter than built-up steel sections of equivalent load capacity
- Fully hot-dip galvanised (600 g/m²)
- Available ex-stock from accredited Galintel® distributors
- Available in standard lengths
- Fully engineered and university tested
- Full product warranty

Galintel Cavi-T-Bar™ Safe Load Tables

■ Loads limited by deflection of 1/500 span

Notes on Safe Load Tables for Cavi-T-Bar™

These load tables assume:

- The web of the Cavi-T-Bar™ is vertical.
- The Cavi-T-Bar™ is simply supported at both ends.
- The Cavi-T-Bar™ is loaded such that the load acts vertically and equally on both sides of the web.
- The Cavi-T-Bar™ is considered as being laterally unrestrained for the full span length.
- UDL loads are constant along the length of the bar.
- Point loads act at mid-span.
- 150mm minimum bearing support on to brickwork.
- Hot-dip galvanising to AS/NZS4680:2006.
- Loads are in accordance with AS/NZS1170.1:2002.

Designation: Vertical Leg (V) = Height x Thickness (t)
Base (B) = Width x Thickness (t)

FREQUENTLY ASKED QUESTIONS

EVERYTHING YOU NEED TO KNOW ABOUT GALINTELS®

How do I decide which Galintel® is best for my project?

Your design engineer should determine the type, size and length of Galintel® for the brickwork openings by consulting the relevant technical data and safe load tables.

Why are Galintel® products hot-dip galvanised?

Hot-dip galvanising (HDG) is the most economical form of providing corrosion protection for steel, to prevent rust. Brickwork cracking caused by rust displacement is virtually eliminated by the corrosion protection of HDG. HDG also offers excellent impact and scratch resistance to cope with the rigours of transport and handling on a building site.

What if I require a non-standard length Galintel®?

You may use a longer length of Galintel®, which will result in a longer end-bearing length. Where the end-bearing length is restricted, you can cut the Galintel® to the required length. The cut end must be cleaned, primed and painted with a zinc-rich paint (minimum 95% zinc content). However, product warranty would not apply.

Do I need to prop Galintels®?

Yes. During installation, props must be positioned and not removed until the mortar is cured. This allows the composite beam to form correctly and ensures level alignment of the brickwork. Props should be no further apart than 1.2m.

How many courses of bricks

are needed above a steel lintel?

The Building Code of Australia requires that not less than three courses of bricks must be used above a steel lintel to form an arching effect.

Can I weld to a Galintel®?

We don't recommend that you perform welding on Galintel® products as welding destroys the protective zinc coating. If welding is required, consult your design engineer.

Which Galintel® product is best suited for a rendered finish application?

Galintel Rendabar® is ideal, because it is specifically designed and developed for rendered applications.

Is there a Galintel® available for fire-rated structures?

Yes. Galintel Rendabar® has a fire rating of up to two hours, depending on the application. To achieve the designed fire rating, the Galintel Rendabar® must be cement-rendered after installation. The rendering must also meet relevant building codes and standards. For design information, refer to the Rendabar® Fire Rated Safe Load Table.

Are Galintels® suitable for buildings near the coast or in severe environments?

Galintels® are suitable for use in these areas, but additional coatings may be required. AS2312 specifies the types of additional protective coating needed to maintain the required service life in highly corrosive environments.

What guarantees do Galintels® offer?

NEPEAN Building & Infrastructure guarantees that all Galintel® products are free from defects in material and workmanship.

Galintels® have been appraised by the CSIRO, they comply with the requirements of the BCA and are designed and tested to meet the relevant sections of AS3700:2001 – Masonry structures.

Galintels® meet the requirements of the R3 durability classification, as defined in AS/NZS2699.3:2002.

Galintel® products have been recognised by the Australian Design Council with an Australian Design Award.

How do I identify a genuine Galintel® product?

Galintels® can be identified by their ribbed profile. All products in the Galintel® range are also clearly labelled to show the name, size, length, unit weight, month/year of manufacture and durability classification.

How do I ensure full composite action is achieved?

By ensuring that mortar is present at all contact surfaces between bricks and lintel and that the lintel is correctly propped during installation.
